-  **Long Lasting**

Kid and Pet Safe!

Even the most ancient civilizations recognized the benefits of Cedar Oil. The Sumerians used it to make paint. The Egyptians used it for preserving mummies and the Greeks and Romans used it for its fragrance, for treating wounds and to repel insects. Cedar has both antibacterial and insect control properties.

How does Nature's Creation® CedarRepel control insects?

Pheromones are chemical "markers" by which many insects and mites communicate. Ants use pheromones to mark their trails and navigate. They use them to direct other ants to a food source. When their mound is disturbed their pheromone warnings bring reinforcements boiling out of the mound. Other insects use pheromones to find mates. The use of pheromones by insects has been well documented. The aroma of our CedarRepel disrupts an insect's, or mite's, ability to receive and decode these chemical signals. By overloading their pheromone senses it creates terminal confusion. They lose the ability to perform tasks like mating and finding food. Their response is to immediately flee from the odor or die. Some studies of Cedar Oils show that it can actually kill insects like mosquitoes. (See Armed Forces Pest Management Board Study, <http://www.afpmb.org/sites/default/files/pubs/dwfp/publications/FY07/McAllister/dolan-jeconent-oils.pdf>.) Our CedarRepel has a very low toxicity to humans and warm blooded animals. The EPA has studied it extensively and found that its health risks to humans are so low that it is included on their list of minimum risk pesticides.

Nature's Creation® CedarRepel Granules

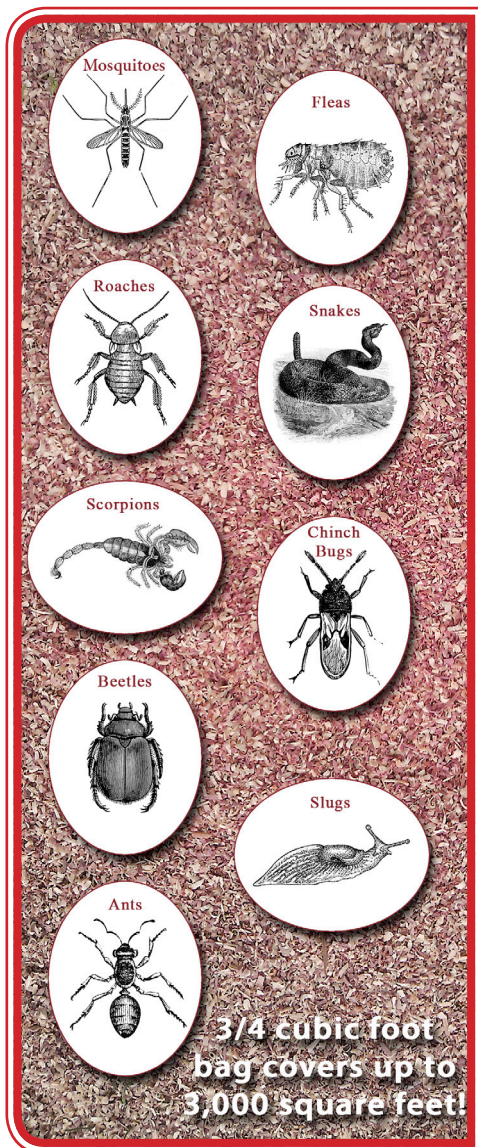

We make our granules with fine, uniform chips of 100% Eastern Red Cedar (*Juniperus Virginiana*).

Each 3/4 cu. ft. bag weighs approximately eight pounds. It is designed for easy broadcast application with a spreader or by hand. It is great for fleas, mosquitoes, and ants in problem areas. Once these insects are exposed to its odor they quickly evacuate the area to escape its effects. In the winter and during summer heat and drought, noxious insects come indoors to find hospitable temperatures, food and water. To keep them outside where they belong apply a two to four inch wide unbroken band of our Nature's Creation® CedarRepel Granules around your foundation. Ants, fleas, roaches, and other insects will avoid crossing this border.

Nature's Creation® CedarRepel is great for camping and picnics!

With its light weight, Nature's Creation® CedarRepel Granules are a convenient product to take along on picnics and camping trips. Put a band of Nature's Creation® CedarRepel around the occupied area to keep bugs away. Spread to minimize having to share your time with crawling insects.
