

Natural

- Mother Nature's Naturally Organic Material
- Purest Form of Diatomaceous Earth
- Naturally Occurring Silicon Dioxide
- Contains Numerous Trace Minerals

Nature's Creation® Diatomaceous Earth Food Grade is Mother Nature's eco-friendly naturally organic material. Our product fits into the "Living Green" lifestyle.

Actually, Diatomaceous Earth is not an earth. It is the fossilized remains of microscopic shells created by one celled plants called DIATOMS. Not all deposits of Diatomaceous Earth diatoms present in those deposits are the same.

Nature's Creation® Diatomaceous Earth Food Grade is almost pure white and consists of 100% Silicon Dioxide. **Nature's Creation® Diatomaceous Earth Food Grade** does not swell, does not absorb nutrients and poses no long-term hazard when used as an anti-caking agent in your animal's feed.

Why Freshwater vs. Saltwater Diatomaceous Earth?

Freshwater deposits of Diatomaceous Earth have a consistent diatom presence. Their fossilized shells have maintained their tubular shape. This shape and strength of the fossil shell is critical to its effectiveness and the deposit is also more consistent in its purity of other elements that have settled in it. A freshwater deposit is confined to the runoff water of its surrounding environment. A freshwater deposit in the mountains, where the

Nature's Creation® Diatomaceous Earth Food Grade is mined, formed during the volcanic period on earth when snow was pure and full of minerals. Its runoff provided the water source these diatoms lived in. Saltwater deposits contain a mix of types of diatoms of different shapes. Their fossilized shells are fragile and break easily. This renders them ineffective for our purposes. The saltwater deposits are less predictable in their sediments.

This product is not the same as Diatomaceous Earth used in filtration such as swimming pools that is crystalline silica heated to make it crystalline. It should be avoided. **Nature's Creation® Diatomaceous Earth Food Grade** is naturally occurring amorphous silica and contains less than .005% of natural occurring crystalline silica that is present in all natural water.

DIRECTIONS FOR USE:

Mixing Rate:

Nature's Creation® Diatomaceous Earth Food Grade is an anti-caking agent to be mixed in animal feed at a rate not to exceed 2% of the dry weight of the total rations.
