- **Balanced Blend of Black Humus Compost, Horticultural Sand, Composted Forest Products, Kelp Meal, Composted Rice Hulls, and Poultry Manure**
- **Resists Clumping**
- **Contains Both ENDO & ECTO Mycorrhizal Fungi**
- **Provides Excellent Environment For Microorganisms To Thrive**
- **Great For Raised Beds**
- **Kid And Pet Friendly**

Nature's Creation® Organic Garden Soil with Mycorrhizal Fungi is a balanced blend of black humus compost, horticultural sand, composted forest products, kelp meal, composted rice hulls, poultry manure and mycorrhizal fungi. **Nature's Creation® Organic Garden Soil with Mycorrhizal Fungi** is the ideal stand-alone growing medium providing an excellent environment for beneficial microorganisms to thrive and assist in producing essential plant nutrients. It is substantial enough to support growing plants while providing optimum conditions for root growth and oxygen and moisture balance. It can be used for planting vegetables, annuals, perennials, herbs and seeds. It is perfect to use in raised beds, planter boxes, whiskey barrels and other containers. Continue to increase the microbial activity and improve the soil condition with **Nature's Creation® Premium Lawn & Garden Fertilizer with Mycorrhizal Fungi**.

Vegetables, Annuals, Perennials, Herbs and Seeds

For in-ground planting, loosen the existing soil 10" - 12". Remove spent crops, roots, large rocks and break-up compacted soil. Rake and level the surface and mound 4" - 6" of **Nature's Creation® Organic Garden Soil with Mycorrhizal Fungi** over the level area. This will create a garden rich in organic matter and porous enough to increase oxygen for aeration to the root system. Compaction is eliminated so that water drains easily. **Nature's Creation® Organic Garden Soil with Mycorrhizal Fungi** builds life in the soil, helping to establish a healthy root system for plants to reach their full potential.
